#### **SUBMISSION**

Sir:

Applicant submits herewith an English language translation of the PCT International Preliminary Examination Report for the above-identified application. The PCT International Preliminary Examination Report was submitted in the French language along with the U.S. national phase application on December 10, 2004.

I hereby certify that this correspondence is being deposited with the United States Postal Service with sufficient postage as First Class Mail in an envelope addressed to: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450, on February 28, 2005:

Klaus P. Stoffel

2. Citations and explanations

Reference is made to the following document:

D1: US-A-6 163 270 (SILVERMAN DAVID PHILLIP) 19
December 2000 (2000-12-19)

- The application fails to comply with the requirements of PCT Article 6, since claims 1, 3 and 4 are unclear.
- 1.1 The terms "security configuration", "fault configuration", "reference condition" and "security circuit" used in claims 1, 3 and 4 are vague and equivocal, and cast doubt on the meaning of the technical features to which they refer. The subject matter of said claims is therefore not clearly defined (PCT Article 6).
- of clarity, the subject matter of claims 1, 2 and 600 is not novel within the meaning of PCT Article 33(2). Consequently, the requirements of PCT Article 33(1) are not met.
- 2.1 D1, which is considered to be the prior art closest

International application No. PCT/EP 03/07131

to the subject matter of claim 1, describes (the references between parentheses apply to said document):

"a control and/or surveillance device (10) including a plurality of peripherals (16, 18, 19), a central control unit (14) and a communication network (13) connecting the central unit (14) to the various peripherals (16, 18, 19), characterised in that it further includes an electric security circuit that selectively adopts a security configuration or a fault configuration (column 1, line 62 to column 2, line 31; column 3, line 57 to column 4, line 14; column 5, line 64 to column 6, line 9; column 7, line 40 to column 8, line 37); in that, at each instant, each peripheral (16, 18, 19) is subjected to a condition that totally or partially affects it (column 1, lines 62 to 64), which condition belongs to a plurality of possible conditions including a reference condition (ON, OFF, IDLE) and is reported selectively in the form of a context code by the peripheral concerned (column 3, lines 57 to 62); and in that the central control unit (14) TECHNOLOGY CENTER 2800 includes at least a first transmission controller (20) which has a stored reference code (column 5, lines 27 to 46) for each peripheral (16, 18, 19) consisting of the context code (ON, OFF, IDLE) transmitted by the peripheral concerned (16, 18, 19) and indicating the reference condition thereof; which reads the context code of each of the peripherals (16, 18, 19) by periodically polling these peripherals according to a predetermined addressing order; which compares

# SEP - 7 ?

#### INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/EP 03/07131

one by one the context codes (ON, OFF, IDLE) it reads by polling the peripherals to the reference codes it has stored; and which controls the transition of the security circuit from the security configuration to the fault configuration on detecting the absence of one of the codes to be compared or a discrepancy between the codes it has compared (column 5, line 63 to column 6, line 9).

The subject matter of claim 1 is therefore not novel (PCT Article 33(2)).

- 2.2 The additional features of dependent claims 2 and 6 are also disclosed in D1:
  - claim 2: column 5, lines 27 to 46;
  - claim 6: column 3, lines 48 to 51.

    The subject matter of claims 2 and 6 is therefore not novel (PCT Article 33(2)).
- Furthermore, even if claims 1, 2 and 6 were interpreted in such a way as to enable the novelty of the subject matter of the application to be acknowledged on the grounds of minor differences in comparison with that of D1, the subject matter of claim 1 nevertheless does not involve an inventive step (PCT Article 33(3)) with regard to D1, since said document discloses the same subject matter and describes the same kind of solution as the present application.
- describes the same kind of solution as the present Application.

  3. The present application does not satisfy the conditions stipulated in PCT Article 33(1), since the subject matter of claims 3, 4 and 5 does not involve an inventive step as defined by PCT Article 33(3):

International application No. PCT/EP 03/07131

- claim 3: a slight alteration in the construction of the control device described in claims 1 and 2 is suggested, in particular the existence of a second transmission controller in the central control unit. Said alteration is part of the standard practice of a person skilled in the art and the resulting advantages are easily foreseeable;
- claim 4: see D1, column 5, lines 27 to 46;
- claim 5: to a person skilled in the art, supplying electric power to the peripherals via the communication network is a routine constructional step.

The subject matter of claims 3 to 5 therefore does not involve an inventive step (PCT Article 33(3)).
